

Deployment Guide

April 2026

Proxara, Inc.

28 Geary St. Suite 650 PMB 5328

San Francisco, CA 94108

proxara.ai

Overview

Proxara handles all infrastructure setup. Your firm does not need to provision, configure, or maintain anything on the backend. The only hands-on step is pushing the browser extension to employee devices, which takes minutes.

Works on all Chromium browsers: Chrome, Edge, Brave, Arc, and others.

Extension Deployment

Two deployment paths depending on whether the firm uses managed devices.

MDM Deployment

For firms with company-managed devices
(InTune, JAMF, or equivalent)

- 1 Proxara provides the extension ID and configuration profile
- 2 Add the extension to your MDM's browser policy as "Force Install"
- 3 Apply the configuration profile
- 4 Deploy to target devices

The extension installs silently. No action needed from employees.

Google Workspace / Microsoft 365

For firms without MDM or where employees use personal devices

- 1 Proxara provides the extension ID and configuration file
- 2 Add the extension in your admin console as "Force Install"
- 3 Apply the configuration
- 4 Save

The extension activates only when the employee is signed into their work account. Personal profiles are not affected.

Both paths take a few minutes. Proxara provides the extension ID, configuration, and a step-by-step walkthrough. Employees see a brief monitoring notice on first use, customizable with your firm name and compliance contact.

Try It First

Private demo extension

A private, unlisted version of the extension is available on the Chrome Web Store for hands-on evaluation before any firm-wide deployment. It runs in a completely isolated sandbox. No login or account needed. Your data is not stored and is purged when the extension is removed.

This is separate from the production extension and intended purely for individual evaluation.

UPDATE APRIL 2: CURRENTLY UNDER CHROME WEB STORE REVIEW

What Proxara Handles

Proxara provisions and manages a dedicated, isolated cloud environment for each deployment. Your firm does not need to set up or maintain any infrastructure. This includes:

- Classification and redaction engine
- Encrypted database (audit records, policies)
- Encryption key management
- Compliance governance console
- Private inference (processed, not stored)
- Audit archive storage

Each deployment is single-tenant and fully isolated. No data is shared between deployments. Proxara handles provisioning, updates, and maintenance. If you integrate with a compliance archive (Smash, Global Relay, or equivalent), Proxara configures that connection as well.

What Happens on Day One

- 1 Proxara provisions your dedicated environment (handled entirely by Proxara)
- 2 The extension is pushed to employee browsers via MDM or admin console (a few minutes)
- 3 Employees use AI tools normally. Proxara classifies and redacts in real time.
- 4 Flagged interactions are sent directly to you through email, Slack, or Teams

Timeline

< 24 hours Backend provisioned by Proxara	Minutes Extension deployed to employees	Same day Fully operational
